AIRPANEL2

Overview

AirHMI is a Human Machine Interface (HMI) Solution for HMI GUI project development, combining a built-in processor and memory touchscreen with AirHMI Editor software. Using the AirHMI Editor software, you can quickly develop HMI GUI with C-based instructions to drag and drop components (button, label, picture, etc.) and code how the components interact on the display side. The AirHMI HMI display connects to the peripheral MCU via RS485 and 24V supply to provide event notifications that the MCU can act on, the MCU can easily update progress and status back to the AirHMI display using instructions.

AirHMI HMI Panel Pc supports modbus RTU over Rs485, allowing you to manage your modbus devices.
